1. [REDACTED] very rapid assumption of responsibilities

25X1A

for a major high-priority TSD program some months ago have clearly demonstrated a mature approach to his job. In a short period of time he reviewed the problems associated with this program - and they were both technical and administrative - by organizing and holding a series of very pertinent conferences, conceived and put into being a number of interrelated projects with external contractors and is presently providing the technical guidance to these contractors in a most professional manner.

2. This kind of activity, self-started and well executed, is the quality of work we usually expect from a GS-12 or GS-13. We feel that [REDACTED] is seriously undergraded in relation to the kind of work he has been performing, and recommend his immediate promotion to a GS-9.
